

NEAXMail® AD-120

Delivering Dependability, Message after Message

Ever-increasing customer service expectations and an exploding number of daily communications characterize today's business environments. Many companies are looking to Unified Messaging to meet such growing demands. NEAXMail AD-120 with "True Unified Messaging" offers an ideal solution for addressing the communications requirements of your business, today and tomorrow.

NEAXMail AD-120 is part of the NEAX Family of Communications Systems, namely the NEAX® 2000 and the NEAX 2400.

The NEAXMail AD-120 is a Microsoft® Windows® NT®-based solution designed for businesses requiring true unified messaging within a Microsoft Exchange® environment. It harnesses the power of Microsoft Exchange and NT to provide single point of administration, a single directory service and a single message store. In contrast, other "unified"

messaging solutions often require multiple inboxes for each user as well as separate administration and directory services — which falls short of "true" unified messaging. With NEAXMail AD-120, your business can benefit from increased reliability and reduced system administration costs.

True Unified Messaging

NEAXMail AD-120 delivers voice, fax and e-mail message into your Microsoft Outlook® inbox, where you can manage the information from a PC, telephone or the Internet. The NEAXMail AD-120 provides an Intelligent Voice Mail interface, offering a streamlined system conversation and multiple menu options. You can listen to your e-mail over the telephone, check voice messages from the Internet or forward faxes to wherever you may be. Internal subscribers and outside callers can reach employees, leave messages, receive information, and

handle voice mail faster and more efficiently than ever before. NEAXMail AD-120 also provides a dynamic, personal Web browser interface, Active Assistant®, which allows subscribers to customize their personal mailbox options quickly and with ease. In

addition, optional modules are available, such as ActiveFax™, which delivers faxes directly into your Microsoft inbox, as well as features reflecting the latest Text-to-Speech technology. The ultimate benefit, of course, is that all of your messages are consolidated in one place, giving you the power to access, manage and reply to them from virtually anywhere.

Delivering Dependability, Message after Message

True Business Benefits

Executives, sales and IT professionals, mobile professionals, and employees benefit from quick access to, and immediate notification of, messages delivered to one inbox. Since all messages reside in one place, they can be grouped, or "foldered," together. In this way, you can maintain a complete communications record regarding a customer, project or issue. Time is not wasted looking for messages; customers experience quicker response time and better service. Mobile professionals traveling without a laptop can listen to their e-mail messages, now read over the phone with AD-120's Text-to-Speech capabilities. From their desk or laptop PC, busy executives can visually scan and prioritize their messages, so that critical time constraints can be met with ease. Furthermore, the easy-to-use browser-based system administration

interface saves time, expense and effort, helping IT professionals manage their systems more efficiently and effectively. And, by leveraging the existing knowledge of your Microsoft Exchange/Outlook files, AD-120 helps your IT professionals increase end-user comfort levels and minimize training time.

Store It and Share It with Live Record

NEAXMail AD-120 with digital integration boasts powerful custom voice mail features, such as Live Record, to help you capture conversations in real time as they are being conducted, without needing to incorporate other recording devices. Once users capture conversations via Live Record, they can store them and share them with others, who, in turn, can store them and share them with others, as well... all without losing the subtle nuances inherent in the original call.

NEAXMail AD-120 — It's For Everyone

NEAXMail AD-120 works with the desktop applications you use every day, leveraging what you already know about your system and adding value to your favorite communications tools. Through forward-thinking design and development initiatives for voice and data convergence, NEAXMail AD-120 provides

true unified messaging integration with today's and tomorrow's NEAX Family of Communications Systems as well as emerging NEC Internet Protocol (IP) solutions. NEAXMail AD-120 further protects your existing investment as well as positioning your business for a smooth transition into the seamlessly converged environments of the future.
