

NEAXMail® IM-16 ActiveFax®

Fax Management With the Power of Voice Messaging

ActiveFax is a powerful combination package that provides a single mailbox solution for voice and fax messages.

Fax Mail stores incoming faxes electronically, sending them when and where the subscriber chooses. These powerful, yet easy-to-use features allow subscribers to enhance communications and increase productivity.

Fax Mail

Fax Mail provides simple, direct and secure facsimile

transmission from outside callers to subscribers. Using fax store-and-forward capabilities, incoming faxes are sent directly and confidentially to a subscriber's personal fax mailbox, where they are stored until the subscriber retrieves them. Also, the caller has the option to annotate the fax with a voice message. Voice annotation allows the caller to provide any additional comments in his or her own words, allowing callers the option of presenting a more coherent message.

Set-up options are controlled by the subscriber. All faxes may automatically print to a designated fax machine, be

automatically forwarded to an outside telephone number, or remain stored on the voice processing system until the subscriber chooses to retrieve them.

Since documents are stored electronically, Fax Mail is especially convenient if the subscriber is traveling, wishes certain faxes sent to another number or is expecting a document containing confidential information. When away from the office, users no longer need to check with an office assistant to see if a fax arrived, and then have it resent to another location. And, when expecting a fax document containing confidential information, Fax Mail ensures against the wrong eyes seeing the document.

Features

Minimum System Requirements

- ActiveFax requires current hardware specifications for the NEAXMail IM-16. Refer to NEAXMail IM-16 literature for general descriptions and for specifications.
- NEAXMail IM-16:
4- to 16-port systems:
4 fax ports maximum

The subscriber learns of received faxes when checking the voice mail system for new messages. At this time, the subscriber may listen to the voice annotation and send the fax to a fax machine or save it for future transmission.

System Requirements

ActiveFax is available in either 2 or 4 port options and works with the NEAXMail TeLANophy suite of Unified Messaging modules (ViewMail®, ViewMail for Microsoft® Messaging and ViewFax®.) This gives the user the ability to send and receive faxes from their desktop PC.

A Member of the NEAXMail Family

Customized for the NEAX 2000, the NEAXMail IM-16 is an advanced business messaging system that provides automated attendant, voice mail, audiotext and facsimile capabilities fully integrated for smooth, reliable communications.
